HOLLY WONCH

EDITRIX IN CHIEF

Even after spending hours pouring over thousands of photos from Skule events, searching the same photoset fifty different times for fifty different students, navigating through dozens of personal online photography collections, and sizing and resizing a shot until it reaches perfection - I will always remain in awe of the beautiful people that I see in those photographs. Each student at this university is unique – we speak different languages, wear different clothing, celebrate different holidays. It's this unabashed individuality of the students that makes the University of Toronto such an inspiring place to be. And when you combine the rich heritage of each of our students with the historic foundation of Skule™, you get a faculty that is like no other in the world. I've been in love with this school since the day I moved to Toronto – partly because of the city, and largely because of the people. I hope you'll agree that this book showcases our amazing students, our celebrated traditions, our numerous achievements, and the everyday beauty that exists around campus.

I won't lie, I'm incredibly stressed about the permanence of this little blurb….the first paragraph was rather serious. But, if nothing else, aren't yearbooks meant to capture those moments in your personal history when you were incredibly lame, and overtaken by the romanticism of nostalgia? Take grad quotes. Is there anyone on the planet who is still dating the person they gave a shout out to in their grad quote?

This year has been….ridiculously busy, and would have sent me to the grave if it wasn't for the help of so many people in my life. A big thanks goes out to everyone I harassed for help this year – your photos, CDs, access to Facebook, links to Picasa and Flickr accounts, random dinner dance trivia, and identification of engineering faces really pulled this whole book together. Thanks to my co-editor, Chris, for continuing to use smileys and exclamation marks throughout all of our correspondences, even if he didn't mean them. Thanks to Nigel for doing everything, all the time – hey, at least you know how to use Adobe products now. Thanks to Eamon for always coming to the computer rescue…the Mac is a harsh mistress. Thank you to Barb for being Barb. Thanks to gmail, MSN, and Facebook, without which I would not have been able to accomplish anything while on PEY. Thanks to Donna at IBM for continuing to smile through clenched teeth. Your flexible and accommodating nature is unparalleled. The biggest thank you of all goes to the omnipresent Lamar for fulfilling the ridiculous photo requests that Chris and I made, and continuously providing us with a plethora of shots to choose from. Even after graduating, he continues to give so much to this society by chronicling our time at Skule™ through comprehensive photosets that are made public often mere hours after an event has concluded.

I truly hope you all enjoy the 2006 Skulebook as much I enjoyed working on it.

CHRIS DOAN

EDITOR IN CHIEF

I can't pinpoint the exact moment I became enthralled with making yearbooks, but it must have been sometime around the end of sixth grade when I received my first "yearbook", a photocopied cut-and-paste job put together by my homeroom teacher for our class as a present for graduating elementary school. I've since worked on six different yearbooks for four different schools, and the excitement of putting one together has yet to wear thin. I'm not exactly sure what keeps motivating me to sign that form and enlist myself to work on yet another yearbook; I suspect it's partly for the selfish satisfction I get from seeing my work in people's hands, but there's also the undeniable feeling of pride about creating a piece of history that captures one year of our lives. Over the years, I've unwittingly fallen under the spell of yearbooks - cheese and nostalgia included - and this book marks 10 years since I laid my grubby little hands on that sixth grade yearbook.

Even though the thank-yous that I'm about to pen aren't nearly enough to repay those who've put in countless hours for this book, I'm giving my best shot at condensing my enormous gratitude to you all in the span of a few lines. First and foremost, thanks to my co-editor Holly for her unflagging dedication, and for continually making me laugh until my face hurt, even when we were stressed beyond belief. I'd like to point out that this book would be oddly empty were it not for the photographic talents of Lamar, whose contributions to Skule™ stretch far beyond the pages of this book. Thanks to Kharthick for helping us squeeze two (!) books and a slipcase out of our budget; thanks to Mahvish for her uncanny ability to procure writeups; thanks to Roger and Eamon who continually stepped in when the machines rebelled; thanks to Nigel who took on the nightmare that is grad photo layout; thanks to Peter Couto for his infinite patience; thanks to Barb for her continuous encouragement; thanks to CU Ads for selling those ads like hotcakes; thanks to everyone who offered kind words of support and was understanding when I had to put Skulebook before everything else

In the past three years, Skule™ has given me more than I ever could have wished for. I am constantly amazed at the amount of spirit and heart that our faculty has. If with this book, I can give back to Skule™ even a tenth of what I've gotten out of it, then I'll be completely satisfied.

I hope that this book is something you can crack open fifty years from now and smile about.

F!ROSH WEEK CHOCK FULL OF FESTIVITIES

F!ROSH WEEK 2005

A WEEK OF OUTRAGEOUS ACTIVITIES AND UNBRIDLED FUN FOR NEW ENGINEERS

LUKE WESLEY, ORIENTATION CHAIR 0T5

ORIENTATION 0T5

I don't think more planning went into any other week in my life as did for orientation, a unique experience that I doubt I'll ever have again. In retrospect though, it was all worth it, I had a great summer with great people and I would encourage you all to get more involved next year.

As always Engineering put forth the best and biggest orientation on campus. Each year we don our yellow shirts, and descend on Toronto in a purple storm song and spirit. From doing some casual shopping in the Eaton's Centre, quietly feeding the ducks at Nathan Phillip's Square, or casually saying hello to our local high school Ryerson Collegiate, it's hard not to notice us. This year F!rosh Nite almost filled The Guvernment to capacity, and for the first time ever our commuter program actually got of the ground, providing commuters with a place to stay overnight close to campus so they could enjoy more of F!rosh Week.

This years F!rosh Week was the best we've seen this side of campus since nineteen odd six, but I could be slightly bias. This fantastic week of events could not have happened without the indefatigable efforts of my orientation committee. I have never had the pleasure of working with so many uniquely talented and hard working individuals, and to each and every one of you I would like to convey my most heart filled thanks. I would like to make special mention of my outstanding sub-chair Stephanie Whitehurst without whom my experience would have been a lot harder. Over the summer she kept my sanity, sometimes at the cost of her own.

In retrospect I would do this all again, looking back it was one incredible summer. Good luck to next years Queen of Summer Time.

Blue and Gold Committee Chairs 2005 - 2006

BLUE & GOLD

The Blue and Gold Committee is a student orientated activities club, whose main objective is to provide fun, excitement, and allow for interaction between engineering students for all disciplines in a non-academic setting. Blue and Gold is essentially a Skule™ spirit committee. We run many events throughout the year. Starting with F!rosh week, we run the movie nite and organize the bed races. During the fall semester there will be a few more movie nites and a mystery bus tour or two, and the building of the Home Coming float. Blue and Gold's main responsibility, Godiva Week, occurs during the spring semester. Later, in the spring semester there will be more movie nites, mystery bus tours, and a few oddball events.

What do these events actually entail? Bed races are pretty self explanatory. On the first day of class the Upper years challenge the F!rosh to a race, up Kings College Road, on a bed. For a movie nite, a lecture hall is taken over and turned into a theater. Blue and Gold Takes great pride in our Home Coming float. The Skule™ float placed first at last year's parade and we plan to stay number one. The oddball events cover all events that are not covered above. Mystery bus tours are mystery events and the only way to solve the mystery, is to join the tour.

This leaves Godiva Week. As you should know, before F!rosh week at least, is that Lady Godiva rode a horse through Coventry naked for the good of the people her husband ruled. Godiva week is a ceremony for all engineers to reflect on the moral values and dedication to society that Lady Godiva exhibited. In actuality, Godiva Week is a five day long party for engineers to let loose before Skule™ gets too heavy. Events that will take place durßing the week are the Ye Olde Chariot Race, the Mr. Blue and Gold and Godiva's Crown Competitions, F!rosh Hardhat Decoration Competition, the Car Smash, Full Contact Day, Godiva's Wake, and a multitude of other fun and crazy events.

The job of directing and organizing all Blue and Gold events falls onto the committee Chair(s). The Committee Chairs for 2005 – 2006 are Christopher Anderson and Nathan Schnarr. The duties of the Committee Chair(s) are to have all events planned out, lead all Blue and Gold member through the events. If you are interested in becoming a member a Blue and Gold please join our mailing list at http://skule.ca/mailman/listinfo/blueandgold-list_skule.ca or drop us a line at bluegold@skule.ca.

CANNONBALL

CANNONBALL IS THE ANNUAL ENGINEERING SEMI-FORMAL DINNER DANCE HONOURING THE SPIRIT OF GODIVA

BRUTE FORCE COMMITTEE

THIS PAGE DOES NOT EXIST, NEVER HAS EXISTED AND NEVER WILL EXIST

Whether we're fighting the injustice of midterms, the boredom of classes or the tedium of homework, the Brute Force Committee remains committed to the extension and reinforcement of Skule Spirit in everything we do. At the start of the year, this resolve was shaken a bit when we were given a very strong dose of bad news: rooftops, our traditional domain, were made off-limits by the Faculty. This was, to put it mildly, a bummer. All was not lost, however, because the leaders and F!rosh rose to the challenge and were consistently awesome at every

event. Taking inspiration from this phenomenal group of volunteers, we spent about 263 Minister-hours evaluating ourselves and determining how we can capitalize on the changing pranking paradigms we were experiencing. From this we emerged with a new dedication to pranking that will see the BFC entering next year stronger and more committed to Skule Spirit than ever.

THANK YOU

This year could not have been a success without the efforts of dedicated leaders and F!rosh. We tip our hardhats to all of you, and we look forward to seeing most of you again next year.

WE ARE WATCHING

CANNON GUARD AT GRADBALL 2006

CHIEF ATTILIATOR

CANNON FIRING DURING F!ROSH PICTURE AT ORIENTATION

It was a true honour to have been in charge of the Mighty Skule Cannon for the 2005-2006 school year. Although it passed by very quickly, I carry with me fond memories of the spirit that accompanies the greatest mascot ever conceived. I am grateful to those who took it upon themselves to protect me and the Cannon, and those who have shown extended interest in our safety and image. Guard training was very successful, and I feel like I had many competent and enthusiastic people working with me at all times. I am thankful that the walks to and from the Chestnut Hotel were always conducted professionally, even in the freezing cold. The Cannon's safety was never compromised, and it's because of the fine guards that went out of their way and treated events as a call of duty. It is also due to the dedication and help of the other spirit groups, the LGMB and the BFC. Together we form a trinity, reaching out to all students in the name of the spirit of University, reinforcing the balance between academia and extra-curricular life.

Every year, the Cannon evolves. Some things change a lot, and some not at all, but there are always improvements. New methods were introduced in the training, and some organizational tactics have been implemented. More importantly, this year was marked by increased concern in the faculty regarding the Cannon, which has been grandfathered into social events in engineering for the past 75 years. Fire alarms in Sandford Fleming have caused tension between the faculty and the Engineering Society, and as a result, the Cannon has not been as welcome at times as would be expected. However, no traditions were missed and the Cannon remains a strong symbol, marking as many major events as time and safety permit.

The Cannon is eternal, living forever within all of our memories. There is nothing that can efface its power and glory, and no mascot that can compare. We are fortunate to attend a University with such diversity and spirit. I have revelled in this fortune, and now it is time for me to move on. I urge anybody who still has time left to make the most of it, because after this, nothing will compare.

Zachary Hoy, CA 0T5-0T6

HALLOWEEN SUDS

CATHERINE KORINEK & JON HOLLANDS, SUDS MANAGERS 2005-2006

BLOOD, SWEAT AND BEERS

On Friday evening last we received from His Majesty, the Vice President of Finance, the mission to provide cheap booze to engineering students. It was the evident will of The Engineering Society and the nation that this should be conceived on the broadest possible basis and that it should include all parties.

We have already completed the most important part of this task.

A fridge has been stocked with beer of many flavours, representing, with the Domestic, Premium, and Liquor, the unity of the nation. It was necessary that this should be done in one single day on account of the extreme urgency and rigor of events. . .

We now invite the students by a resolution to record their approval of the steps taken and declare their enjoyment in Suds.

The resolution:

"That these Students welcome the formation of a society representing the united and inflexible resolve of the bar to prosecute the war with under-age F!rosh to a victorious conclusion."

To form an operation of this scale and complexity is a serious undertaking in itself. But we are in the preliminary phase of one of the greatest battles in history…

We say to the Society, we have nothing to offer but blood, toil, beers, and sweat. We have before us an ordeal of the most grievous kind. We have before us many, many months until F!rosh turn nineteen.

You ask, what is our policy? We say it is to wage war by slushie, fry, and chicken wing. War with all our might and with all the strength beer has given us, and to wage war against a monstrous tyranny never surpassed in the dark and lamentable catalogue of human crime. That is our policy (along with wristbands).

You ask, what is our aim? I can answer in one word. It is victory. Victory at all costs - Victory in spite of all terrors - Victory, however young the F!rosh may be, for without victory there is no survival.

Let that be realized. No survival for the Friday afternoons drinking with friends, no survival for all that the cheap booze have stood for, no survival for the urge, the impulse of the ages, that Skule shall move forward toward its goal.

We take up our task with the theories of buoyancy and hope. We feel sure that our cause will not be suffered to fail among Engineers. We feel entitled at this juncture, at this time, to claim the aid of all and to say, "Come then, let us go forward together and demolish forty beers!"

SKULE NITE 06

ANNUAL ENGINEERING SKETCH COMEDY REVUE

SKULE NITE 06

ANNUAL ENGINEERING SKETCH COMEDY REVUE

Welcome to Skule Nite, the annual engineering sketch comedy revue! It is a huge year round undertaking, written, produced, acted, and directed by students. The sets are designed and built by students. The music is arranged, played, and conducted by students. The sound effects, the lighting, the sound, and the stage crew are students.

Students (and former students) make up a large portion of the audience, but don't worry, even if you're not sure exactly what engineering is, there are jokes for you too. So, on behalf of everyone whose hard work made Skule Nite possible, welcome, to this the 85th year of the show. Please sit, back relax, and get ready to be offended, astonished and entertained!

VALEDICTORIAN'S ADDRESS

SUNAINA MENEZES 2006 SKULE VALEDICTORIAN

Good evening everyone! My name is Sunaina Menezes and it's my pleasure to be speaking to you tonight on behalf of the graduating 0T6 class and my own class, 0T5 + PEY. A very warm welcome to all of you here this evening, especially to those of us who will be graduating in just a few short weeks.

As you glance around the room tonight, it's amazing to see how far we have all come together. If you flash back a few years ago, most of us were one of a thousand other frosh, floating amidst a sea of yellow t-shirts and clutching tightly to a hardhat as we were herded around and sprayed with water by a bunch of purple painted people. Many of us were unsure as to what exactly we were getting ourselves into. Especially after the first few lectures, whose sole purpose seemed to be to scare and confuse us. Somehow, we managed to sort ourselves out and get the hang of school, giving due thanks to the bell curve when necessary!

We all started off as one of the crowd of engineering frosh. We came from a wide variety of backgrounds and places. We chose different paths, specialized in different areas, branched out, and developed from our younger selves into mature students, now graduating as engineers. In just a little while we will be leaving here with a degree. It's a remarkable achievement, one that each of us should feel pride in having accomplished. Although our degree represents the end result of our years of efforts, it does not fully reflect the moments that characterized and defined our time here. Despite the academic intensity of our program, many of us were heavily involved in the non-academic side of school. We know what it feels like to play together as a team, to win and lose games, to sing engineering songs with the band, to sit through council meetings, and to hang out in the atrium. Whether it was athletics, discipline clubs, the engineering society or one of the many other campus groups here, engineering students made their mark on their community. Be proud of the fact that you have left a lasting impression.

The memories that you look back on may be scattered with times such as hard midterms, difficult problem sets, impossible exams and feelings of despair, however they will also be filled with the overlying sensation that you came out of here stronger than when you stepped in. Overcoming the academic intensity of our program makes our accomplishment all the better.

We didn't make it to this point alone. There were many along the way who lent their support. Parents, professors, TAs, but most of all our fellow classmates. Our friends. The people we saw regularly, who we spent time with both inside and outside of the classroom, the people who were just as lost and confused as we were. We have all required and reciprocated friendship. It's one of the characteristics that distinguishes engineering students, a quality that we each possess. There are some moments that will always bond us together: cramming a semester's worth of material into the time before an exam, pulling all-nighters, submitting assignments at the stroke of midnight, studying really hard and doing terribly, not studying at all and doing well and, of course, those moments on ROSI when you cross your fingers and check your marks. There are some things in university that we're all too happy to leave behind!

As we step out into the world, we draw from our knowledge and experiences here. We are headed for success, to leave our mark in the world. As we move on, we remember those we've spent our last few years with, those who helped to shape us, those who helped us grow, and the engineering experience that brought us together. Our graduation should not be the end of this bond, but rather a continuation of our friendship into our lives beyond university.

A university may have a great reputation and a well respected name, but it will always only be as good as the students that attend it. It is we that ultimately define what our university education will be. And it would be nothing without the people that you share the experience with. Thank you for the memories, for the laughter, for the support, and for the friendship.

I would like to wish everyone good luck with where they are headed. We are well prepared to take on what the world throws at us. After all, if we made it through this we can make it through anything! Congratulations to everyone and all the best for the future!

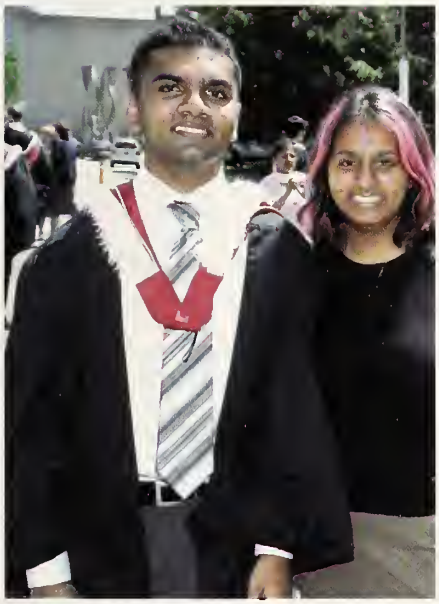
CONVOCATION 2006



ADAM BODDY

EAA PRESIDENT 2005-2006

ENGINEERING ATHLETICS ASSOCIATION

With such an amazing turnout, Skule Athletes represented by EAA led the standings in almost every participation category after the fall sports season. Together we proved the Skule spirit is strong on the fields, courts, and ice at U of T. We grew in every direction, adding 2 more Innertube Waterpolo teams, 2 strong Coed Basketball teams, and reclaiming the ice with 5 Men's Hockey teams each term, just to name a few. Together Skule athletes fielded what must be a record setting number of 27 teams in the fall and 24 in the winter. Plus we had 3 teams in each broomball tournament and 5 teams in the cricket tournaments! Overall, we showed the campus that no amount of studying and homework or hungover Saturday morning game days can keep us back from having fun and showing off our athletic talents!

Congratulations to all the champions and finalists as well! Big respect to the Men's Div 1 Flag Football Team who showed its league dominance by winning its second straight championship.

I'd like to thank the members of the Executive Council for all their hard work. Steph – thanks specifically for an amazing job in organizing the fall rugby tournament, drawing in teams not only from Queens, but also McMaster and Carleton. Mike and Peter – you represented us admirably on the U of T Intramural Council, as well as pushing hard in ballot meetings to get us as many teams and playing opportunities as possible! Quinn – not a single defaulted tournament team! (way to get the ladies) Hamdi – great work with the goods and uniforms. Jen - thanks to for your hard work in making the dream of efficiently run online team sign ups a reality! Jess - everyone who attended will agree that the more traditional athletic banquet, the S-Dance, that was held this year was a great party and celebration. And Justin and Devon – my right hand men, thanks for your help.

As well, thanks to Brent Hanniman, EAA's Hockey Commissioner, for his hard work in restructuring our men's hockey teams and getting us 'off thin ice' with the AC.

I hope everyone had a great time this year. Thanks to all those who came out and played.

A recipe for success

MAKING AN EXCELLENT DRAGON BOAT SEASON

INGREDIENTS

29 of the most dedicated, hard working and energetic engineering students that the U of T has to offer

1 head coach and 2 assistant coaches who will work the team hard and push each member to their limit

1 land practice per week (may contain burpees, pushups, crunches and 50 million jumping jacks)

1 boat practice per week (may cause bruised hips, sore backs and bums and tired arms)

4 competitions, including 6am wakeup calls

1 four-hour torrential rainstorm in Waterloo

5 comedy sketches full of song, dance, rap and humour

1 hard hat on the dragon, for good luck

Fresh Lake Ontario water, for flavour and aroma

Bright yellow jerseys, snazzy shirts and ultra cool hoodies for decoration

Mix ingredients well for four months, occasionally adding team dinners, nights at the club, barbeques and white water rafting. As a final touch garnish with two plaques, two cups and two sets of medallions. Enjoy!

Congratulations to all and see you next year!

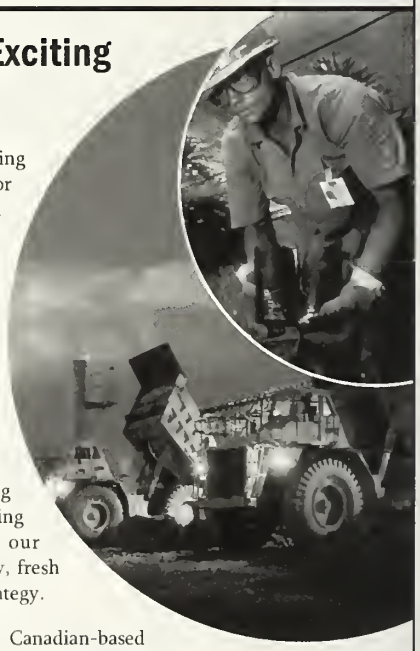
Looking for an Exciting Career In Mining?



The mining industry offers exciting challenges and opportunities for individuals looking to build a career in the industry. Kinross is no exception, as we strive for employee satisfaction. With attractive compensation plans and an achievement-based rewards system, Kinross is an employer of excellence. Kinross encourages employee advancement and skill building through continuous education and cross-functional mentoring programs. Kinross is facing exciting times and we encourage our employees to bring forward new, fresh ideas that could enhance our strategy.

Kinross Gold Corporation is a Canadian-based senior gold mining company with annualized gold equivalent production of approximately 1.6 million ounces. Kinross has interests in 10 operating mines in Brazil, Chile, Canada, United States and Russia. This global portfolio is complimented by a robust pipeline of exploration and development properties worldwide. Kinross is committed to sustainable development and environmental excellence in all of the areas and communities in which we operate.
